Enhancing Officer Safety and Security: Metrasens Empowers County Jail Customer with Surprise Screening

Metrasens Corrections Customer

EAST COAST, UNITED STATES

FACILITY STATS

County jail with approximately 600 residents.

APPLICATION

Surprise inmate screening.

CASE STUDY AT A GLANCE

With a rise in psychiatric patients seeking care, emergency departments are grappling with the challenge of maintaining safety. To tackle this issue head-on, a hospital took a proactive approach by implementing Metrasens' detection systems, capable of efficiently identifying restricted items such as razor blades and needles. The hospital confirmed that Proscreen 200 outperformed traditional screening methods through a comprehensive pilot program. This implementation has effectively transformed the hospital into a safer environment, fostering a sense of security among staff members and ultimately enhancing the quality of care provided.

METRASENS DETECTION SYSTEM EMPOWERS COUNTY JAIL'S SECURITY MEASURES

In their ongoing pursuit of effective contraband screening, a US county jail with a capacity of nearly 600 inmates sought innovative solutions. During a critical sales presentation featuring the advanced Metrasens detection system, an unforeseen incident unfolded, highlighting the urgent need for enhanced security measures. A female subject filed a complaint about an inmate who had utilized a cell phone to threaten and harass her. This alarming report coincided with gathered intelligence indicating that the same inmate had been attempting to coerce witnesses involved in an active homicide investigation using illicit cell phone communications.

Responding swiftly to the situation, jail officers dispatched a team to the specific cell block where the suspect inmate was housed. To ensure thorough screening, all inmates within the block were ordered to evacuate the dorm and undergo comprehensive screening with the state-of-the-art Metrasens detection system. During this meticulous process, the advanced detection capabilities of the system successfully identified two inmates triggering the alert: the suspected cell phone possessor and another individual.

FORTIFYING SAFETY AND SECURITY

The compelling firsthand experience of witnessing the extraordinary capabilities of the Metrasens detection system during the sales demonstration prompted the county jail to take immediate action. Recognizing the tremendous potential of this cutting-edge technology, the jail swiftly acquired and seamlessly integrated the Metrasens detection system as an integral part of their permanent security measures. This proactive approach ensured that no further opportunities to detect and intercept contraband would be missed, fortifying the safety and security of both officers and inmates within the facility.

About Metrasens

Metrasens is a world-leading provider of advanced detection technologies that, combined with tailored solutions, address the deficiencies in conventional screening methods. Metrasens takes science from the laboratory and uses it to create revolutionary products that are effective, flexible, easy to use, and exceed the needs of our customers.
